bio foam

Eats Through Scum Where Flies Breed

Directions for Use

InVade Bio Foam contains concentrated, scum-eating, odor-eliminating microbes and foaming agent. Dilute 1 oz (2 tbsp) to 1 qt with water and place in a hand or power foamer. The product may be blended with an IGR and/or pyrethroid insecticide (and the pesticide label must then be followed). Do not blend with other chemicals.

Drain Foaming: To push thick foam several feet down drains, use a power foamer and put a cover over the drain so that the foam gets pushed down through the trap, rather than coming back up and out of the drain. Apply foam when the drain won't be used for a few hours.

Crack and Crevice Foaming: Fruit flies often aren't breeding in drains. Use a hand or power foamer to shoot foam into cracks and crevices where scum builds up, such as peeling away baseboards, machinery cracks, beverage line bundles, and beverage fountain drip trays.

Precautions: Keep out of reach of children. If swallowed, seek medical attention immediately. Give one glass of water and do not induce vomiting. Wash hands well after use. If in eyes, remove contacts and flush with water for 15 minutes. Seek medical attention for any persistent irritation. Store in a closed, appropriately labeled container, out of reach of children, between 40 and 90 °F.
